

Enabling flawless product releases at global client environments

Software and systems companies are continuously forced to achieve a balance between product innovation, quality and performance, time to market and costs. Competitive pressures force them to focus very heavily on software design and development functions to attain maximum functionality, performance and usability, while partnering with a product testing specialist to augment their engineering teams. Xoriant has provided product testing and quality assurance services to several product engineering teams as their extended arm or in the form of specialized assignments helping our clients launch superior products ahead of their competition, well within their budgets. Xoriant brings extensive experience in testing including web services, desktop and client-server applications, and operating systems components, with over 2500 man-hours and over 10 years of experience. Key features and activities of our test services include:

- Better, faster and cheaper test automation by following proper planning and building reusability of test scripts
- Requirements management throughout the project life cycle and tracking changes to the test cases
- Multi location and distributed testing using easy-to-use and intuitive collaboration method
- Managing testing of multiple builds and versions of the product
- End-to-end process from planning the test automation to the tracking of defects

Xoriant's test management process is firmly rooted in the concepts of better organization, collaboration and information sharing. Some of the key success factors for Xoriant's test management process are:

To augment or enhance your existing product test team or infuse test expertise in your product engineering effort, explore partnering with a software testing and quality assurance specialist like Xoriant to achieve high quality, high performance and short time to market for your products.
